# Overview of Configurable Business Documents

**Phyllis • Accounting Manager**  
Phyllis manages the accounting department, processes GL transactions, reviews and approves AR, AP, payroll, bank transactions, and reviews aging reports. She also ensures that her team accurately completes financial procedures on time.

### Business Document Management workspace

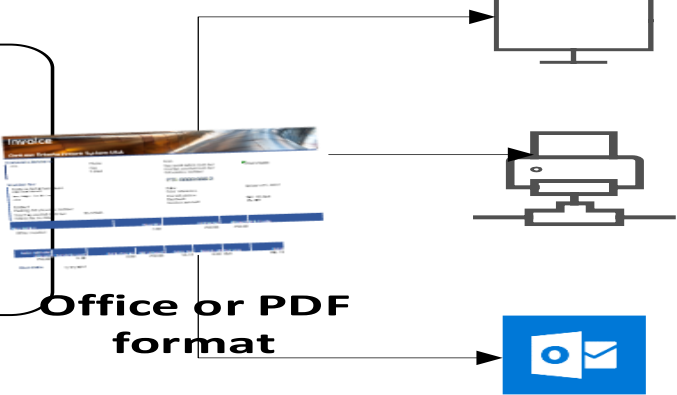

### Electronic reporting

Configuration designers

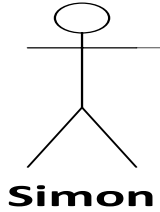

ER Destinations

Office or PDF format

**Simon • Systems Implementer/Consultant**  
Simon analyzes customers' needs, writes the specification and puts together a customized solution. He will do whatever it takes to get the customer's solutions up and running.

# Overview of new features in the April 2021 Release

## Preview support for print management

The user can define the destinations for different print management actions. This means the scenario of Preview/Print> Original can be used for a preview, and Preview/Print >Use print management can be used for email and printing.

## Multiple attachments for an email in ER destinations (GAed in 10.0.16)

This feature extends the functionality of the email destination in the electronic reporting (ER) framework. As a business user, you can use this functionality to set up a custom destination for a configured ER solution to send out generated reports to email recipients as email attachments. For example, you can configure a custom collection letter solution to send a customer an email with a generated collection letter and relevant overdue invoices attached.

## Configurable business documents – additional barcode type support

The list of supported barcodes for the barcode data source in configurable business documents was extended with Intelligent Mail Barcode (IMB).

The full list of supported barcodes is available here:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/analytics/er-barcode-data-sources>
